

HUGA - DURAT Decors for the most discerning customer!

LGA - test has confirmed that DURAT by HUGA has superior performance features. The following features speak for DURAT finishes:

- easy-care and hygienic
- largely anti-static and colour-fast
- heat-resistant
- highly scratch-resistant
- resistant to household chemicals, pastes etc.
- non-injurious to health, approved for direct contact with foodstuffs
- UV-resistant

DURAT direct coating is a process in which decorative paper soaked in melamine resin is permanently bonded to a backing sheet. The process takes place at approx. 180°C and a pressure of 25 kp/cm². This corresponds to a pressure of 430t on a door surface of 198,5 x 86 cm. With CPL or HPL the decor is pressed onto the door's surface with glue at a pressure of only 2,5 to 5 kp/cm².

HUGA's more costly short cycle procedure thus produces a technically superior DURAT surface in comparison to CPL and HPL, particularly with respect to its improved non-scratch properties and better chemical resistance. During the pressing process the DURAT finish acquires a long-lasting impression of natural wood grains or pore effects.

This shows, as promised, - DURAT finish - a decor for the discerning customer!

DURAT maple (wood imitation)

DURAT beech (wood imitation)

DURAT oak (wood imitation)

DURAT ice-ash (wood imitation)

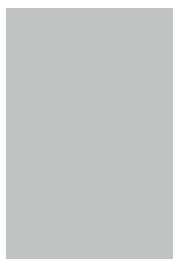

DURAT alder (wood imitation)

Genuine wood

Wood veneer - every door an original

Every tree is different. Its growth, its grain, the wood - no two trees are alike. That's how you know you'll be setting your own new trend with wood veneered HUGA doors in your home and business.

Our experts select only the best trees. They painstakingly check the strength, colour and evenness of the material.

Best material - perfect workmanship

A genuine HUGA door consists of the highest quality raw materials crafted in a series of exacting steps. We demand the best in both looks and function!

Quality sliced veneers are hand-picked by an expert. For every single door. If desired, book-matched too, of course.

Lustrous varnished surface - When it comes to lacquer we subscribe to quality, durability and a flawless appearance. We apply the final coat in a casting process to all appropriate types of wood.

You can see the difference - in our top-quality, lustrous lacquered surfaces.

For the sake of the environment we use only environmentally-friendly acrylic and water-based systems from certified producers.
